

A man with short brown hair, glasses, and a beard is smiling. He is wearing a blue zip-up hoodie over a dark polo shirt. The hoodie has a logo on the left chest featuring an orange cat, a white dog, and an orange graduation cap. He is holding a tan-colored dog with floppy ears. The background is a blurred outdoor setting with dry grass.

ARE YOU LOOKING FOR THE PERFECT EXTERNSHIP?

Look no further than VetCor

Externships are an invaluable facet of every veterinary student's education. They allow students to gain firsthand experience in the veterinary field and acquire a number of skills that will help them start their first jobs with confidence. They also serve as opportunities for students to forge valuable relationships with potential employers.

All of our practices provide beneficial learning experiences to veterinary students looking to dive in to their externships. Because we can offer a wide range of settings and locations, we're able to appeal to a variety of different interests

OUR EXTERNSHIP PROGRAM

In addition to building confidence and providing veterinary students with a well rounded view of what goes on within a veterinary practice, externships allow them to figure out what type of work environment and culture will best set them up for success.

Students who participate in our externship and summer job programs can expect to be exposed to - or gain hands-on experience with these skills.

It is our goal to provide our externs with the tools they need to learn and grow. We always welcome the opportunity to host students at our practices.
